

Lab 09 Report

Report by Joynal Abedin

Documentation

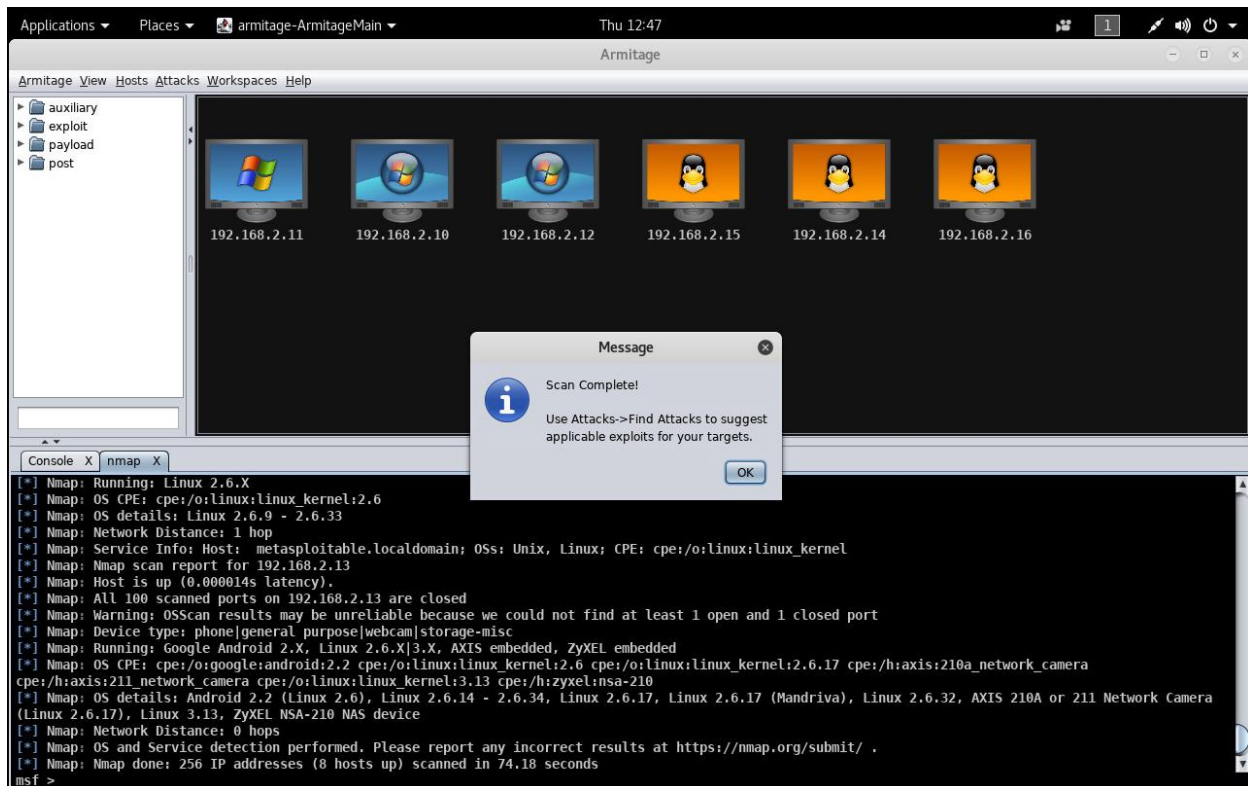

9.1 Armitage

Note: The instructions for this lab was super ambiguous.

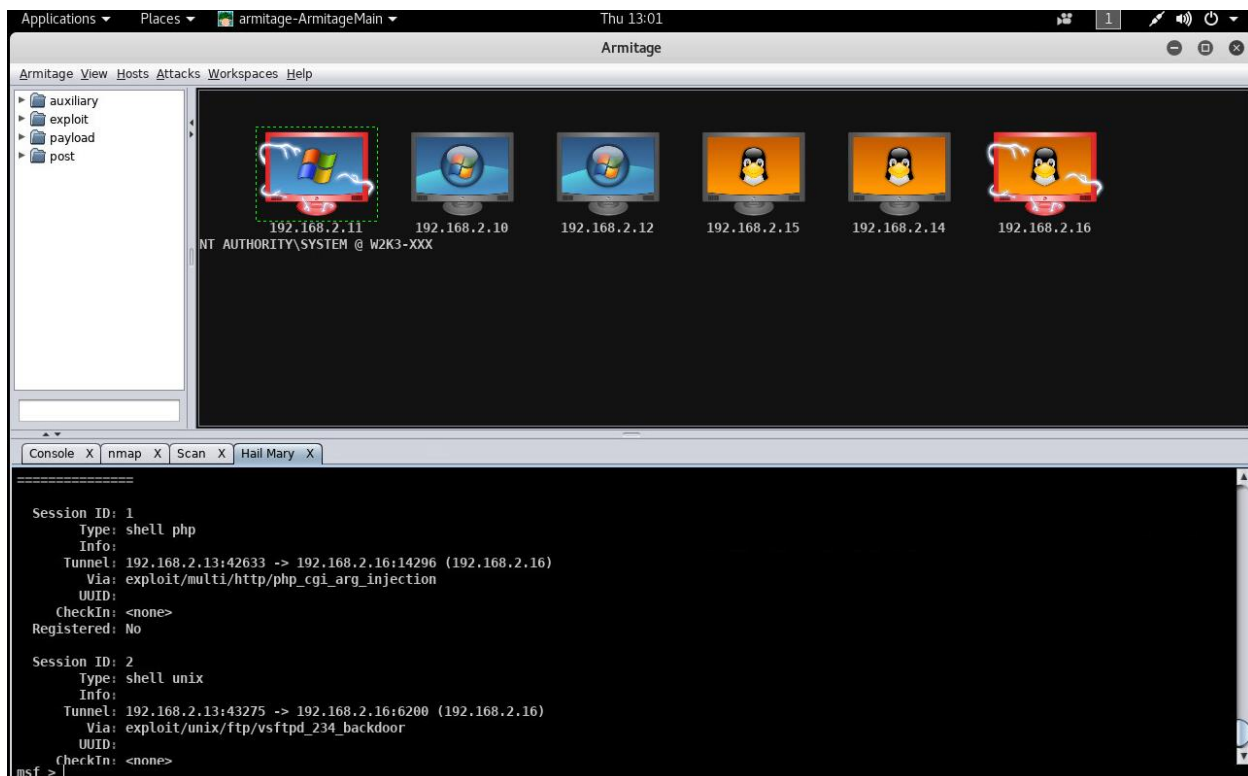

Lab 09 Report

Below picture is to show that the Scan has been Completed successfully.

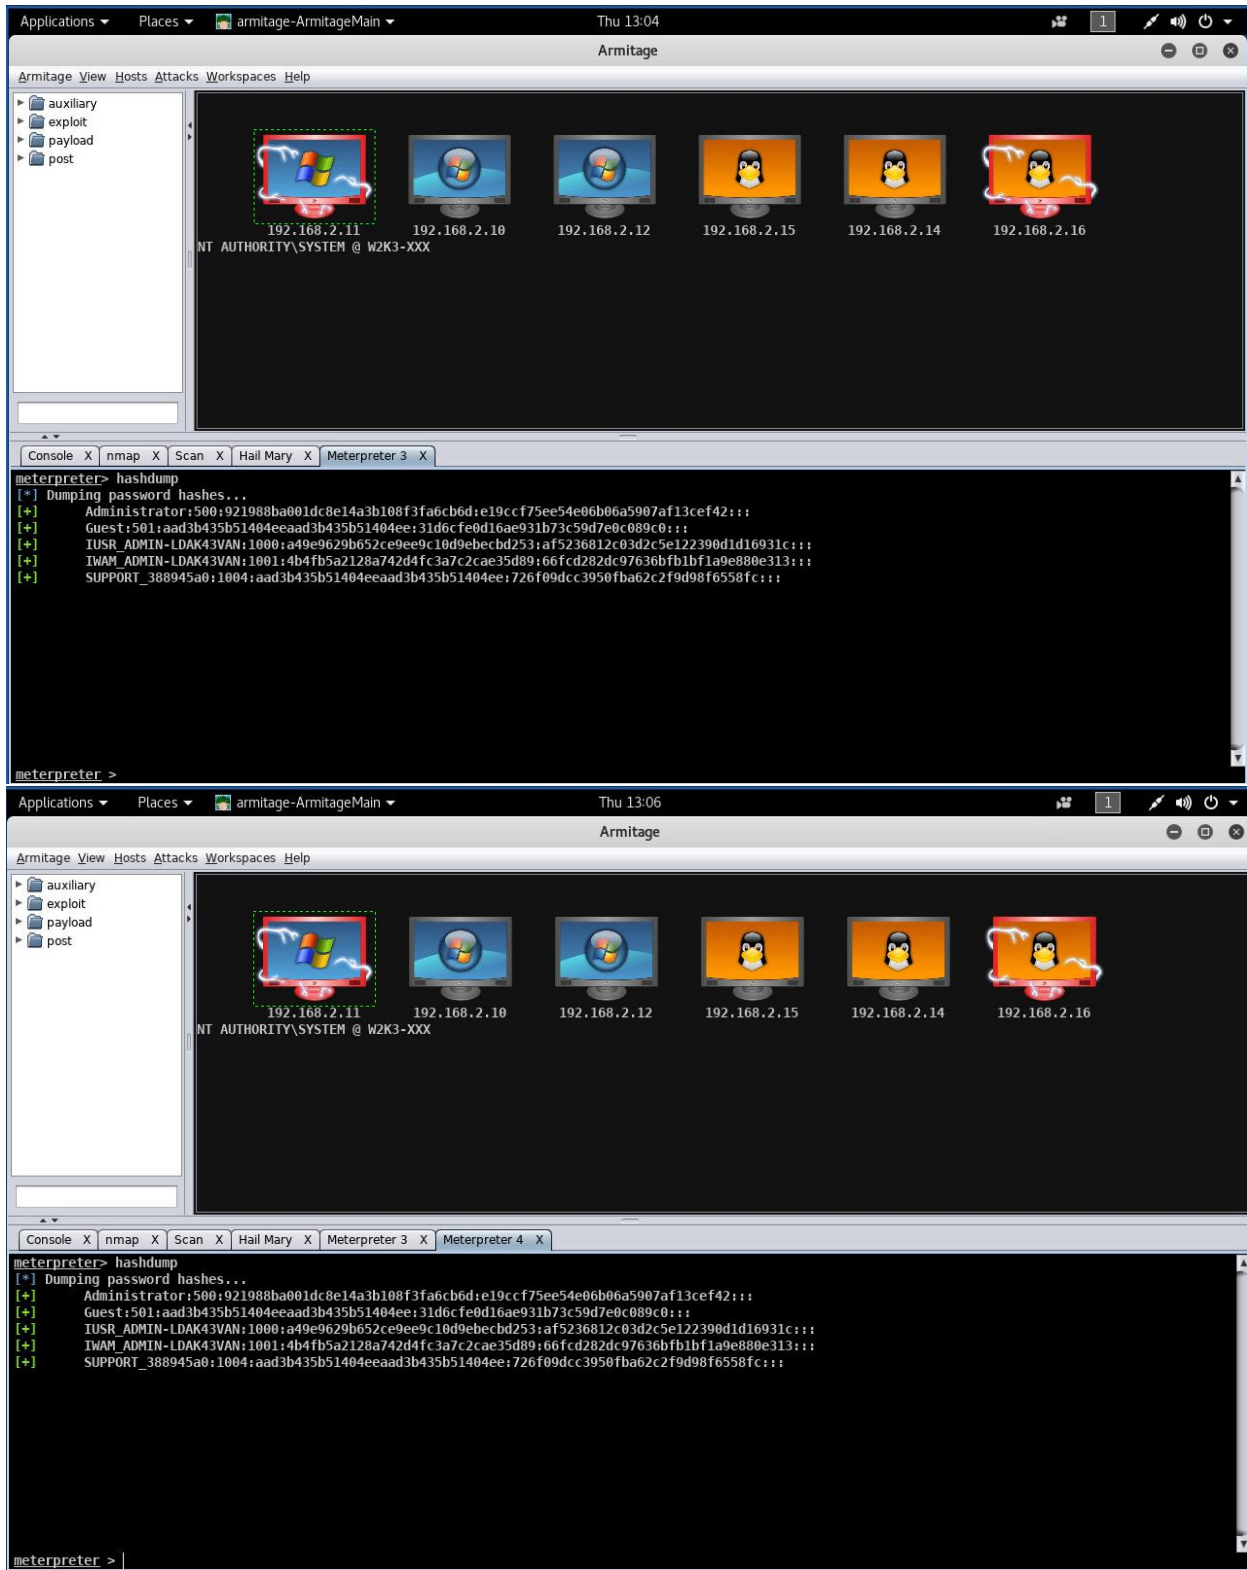

This shows that the target got electrocuted (exploit succeeded)

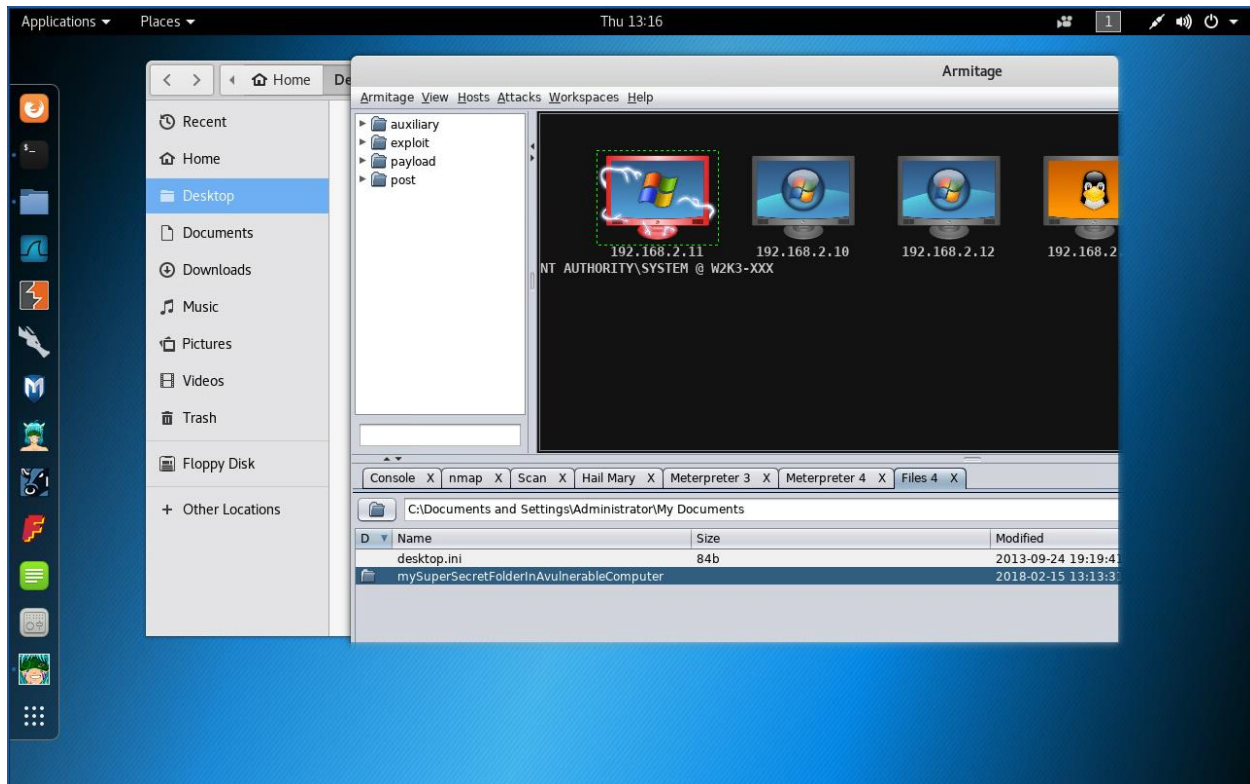

Lab 09 Report

DUMP HASHES

Lab 09 Report

Above screenshot shows how I was able to get into one of the host's "super-secret folder"

Vulnerabilities

Vulnerability 01

Description

Basically, Hail Mary launches exploits at hosts and then you get a few compromised hosts. You can do anything after the host has been exploited. For example, you can get access to the host machines' important files.

Relative Risk (High, Medium, Low)

- High
 - additional budget request may be required
 - need to upgrade all the systems

Mitigation

Upgrade to the latest version of each machines. And I'd highly suggest them not to use these kinds of vulnerable machine at all because it was super easy to get access to the machine.
